Creating design plans before starting any carpentry project is the standard. This is because design plans serve as a template for purchasing the necessary raw materials and preparing the workstation for the coming task. Traditionally, furniture designs were drawn on paper and the carpenter relied on experience to ensure that the dimensions and materials chosen could carry out the project. Although this process worked well for a long time, there are currently more agile tools to do the work of furniture design. These tools are furniture design software that makes it very easy for professionals and beginners to draw and test designs. In this post, the top 15 free furniture design software that you can use will be discussed in some details. Details will include the features and capabilities of each design software application to make it easier for you when choosing one. Free furniture design software applications Google SketchUp In terms of popularity, SketchUp is probably the most used software for writing or modeling furniture ideas without having to part with money. Yes, SketchUp is an initiative of Google and like most Google initiatives, the final game is the ease of use and this software offers. SketchUp features, which are available on Mac and Windows operating systems, include: Drawing and modeling tools for creating 2D and 3D models. An extensive library that can be leveraged for lighting designs and animation effects to help you see designs in real time. Collaboration support that allows you to share models designed with others. Please note that SketchUp's premium features come at a cost. CADPro Furniture Design Software unlike SketchUp with comes with a price warning, CADPro is completely free and offers robust features and tools for your drawing projects. CADPro focuses solely on furniture design, which means you'll have access to the tools needed to create simple and complex furniture models, as well as visualize and document your models. Features include: This free software provides the tools needed to design dovetail drawers, cabinet boxes, living room furniture and commercial projects. Support to share designed models and their documentation to anyone you choose to share with. Voice recording options allow you to record your ideas before you start designing. You can also leave voice notes explaining while certain decisions were being made. An extensive library with free symbols, clip art and pieces of furniture to help or inspire you as you create your furniture designs. Carpentry for Inventor Autodesk role in CAD community has been documented in different articles over the Internet and its carpentry for inventor software is another masterpiece. The inventor, who is different from Autodesk Inventor, is exclusively for carpenters interested in creating complex furniture designs in order to produce furniture using various materials. The software also Ease-of-use features to ensure design time is reduced, so it is a professional set of solutions for furniture design. Features include: The tools needed to build complex furniture designs from scratch are included in the inventor. You can create a 2D draft and 3D models without the limitations you have encountered using other software applications. The option to assign multilayer material, coating, and plate files when creating composite parts. It provides the tools to automate the generation of a bill of materials for your designs. Supports the preparation of furniture designs and parts to be cut by CNC machining. Therefore, you can create furniture design taking into account the cutting, boring, and turning attributes of a CNC machine. Woodwork's inventor is free for 45 days and can continue to use it after the days run out, but limitations will be placed on the features you can use. Sweet Home 3D This open source software has been gathering new fans or users to itself for quite some time. This is due to the fact that you can actually add the features you want to your interface. You can also make use of plugins designed by others to extend the features of this software. Sweet Home 3D features include: Extensive drag-and-drop support for creating your furniture designs. This means you don't have to design from scratch when creating simplistic furniture models. Extensive tools to draw furniture designs from scratch, allowing you to handle complex designs, texturing, lighting and renderings, making it easy to create photorealistic designs. It supports importing furniture designs written on other interfaces into the sweet home 3D interface for edits. Master-Design Art-Shop X-Lite Master Design software is designed for craftsmen or carpenters interested in designing cabinets, furniture and kitchen units on a professional level. The software provides the necessary tools to render and create photorealistic furniture designs and is free to use, although the use of its premium features comes at a cost. It is important to note that the software is only available on the Windows operating system. Features of this software include: Extensive tools to create 2D erasers and animations of your furniture design. These intuitive tools are easy to use, simplifying the process of creating furniture designs. It supports the import of furniture designs for editing and provides the documentation and bill of materials needed to produce the designed furniture. It also provides support for 3D visualizations that allows you to accurately view designs and make decisions. Blender 3D Blender has become a Design software in the open source community due to the professional-level tools it offers its users at no cost. For professional furniture designers looking to take their designs to the next level using free software, you will have difficulty finding any better than It is important to note that Blender is extensive and the use of its tools comes with a learning curve. Its features include: 2D drawing tools and 3D modeling to design, render and animate your furniture designs. With Blender, you get the tools to do anything you choose when it comes to furniture design. Blender offers documentation features and to help you document the entire design process to make furniture deployment or construction a simpler task. The software supports dozens of file formats which makes it excellent as CAD software supporting anyone who uses the other applications in this list. FreeCAD For furniture manufacturers who need an extensive CAD tool to design larger assemblies and furniture projects, FreeCAD gives you all the tools you need to successfully execute your task. Like some examples in this list, FreeCAD is an open source parametric 3D modeling and 2D drawing tool. The software also functions as a building information modeling platform for collaborative work. FreeCAD features include: It provides you with the tools for 2D and 3D modeling, as well as the option to convert from one form to another. It makes use of open source libraries, which means you can extend its features to include what appeals to your modeling needs. FreeCAD provides support for various CAD formats, which means you can use it as a companion design tool or export layouts whenever you want. FreeCAD is completely free and offers you visualization and testing tools to drive your iterative design processes. The BIM features of this software make it an excellent collaborative tool for professional carpenters. Inkscape If free CAD software running on all major operating systems is what you need for your furniture design process, the Inkscape may be the best choice for you. This CAD software works on Mac, Windows and Linux operating systems. With Inkscape, you get a powerful design tool with the ability to help you create 2D drafts and 3D models with ease. Inkscape features include: Flexible drawing tools that support creating furniture models, as well as editing existing models. Support for importing external files for editing purposes. This also means that the software supports multiple CAD file formats so it is a versatile design tool. Inkscape provides text support to document your design ideas to facilitate implementation or the construction process. The texts also make sharing your ideas with others and making sure they understand it a little easier. 360 We had some problems adding this CAD software to the list due to ambiguity with its prices. First of all, Fusion 360 is free for students and young beginners looking to explore furniture design. But for anyone interested in designing professionally or for commercial purposes, Fusion 360 comes at a cost. Therefore, the intended use of the software determines its price. That said, the features of this CAD software include: Extensive tools for 2D 2D and complex 3D modeling. You can use your texturing and animation tools to create professional-quality furniture designs. Fast prototyping features for beginners who do not have the ability to create designs at a high level. These prototyping tools ensure you can get started and complete your task with ease. Collaborative documentation and tools help you create and share your designs with others. Computer-aided capabilities for professionals who intend to design and use digital manufacturing equipment to produce the design of their furniture. NanoCAD This CAD software is a professional-level tool for your 2D and 3D furniture designs or models. NanoCAD is free to use, but will only use specific features. To take advantage of all its tools, you'll need to subscribe to its annual subscription plans known as Nano Plus. Features of this CAD software include: 2D drawing tools and 3D modeling and the option to convert your designs intuitively. Support for various file formats makes it easy for you to import files and use the intuitive interface nano offers to edit or manipulate designs. Support for the manufacturing process to ensure that its sizing is suitable for specific manufacturing equipment. The option to document and share your designs with other stakeholders. Nano is browser-based CAD software that leverages the cloud. 3D – Crafter Newbies to CAD design and carpentry can simplify things a little by using CAD software that supports drag and drop parts to assemble your furniture designs. This is what 3D Crafter aims to achieve with its skeletal and intuitive approach to 2D writing and 3D modeling. Features of this app include: Simplistic tools to create 3D models and photorealistic renders of your furniture designs. Support to import 3D models to edit or manipulate them according to your needs. LibreCAD 2D furniture designs with documentation remain very popular with carpenters and LibreCAD offers you professional-level tools to create these designs. The software is also available on major operating systems including Windows, Mac and Linux. Features include: Drawing and drawing tools to create 2D erasers for your furniture designs. The tools to document the ideas behind your design which makes sharing them easy. Support for multiple file formats that simplifies the task of importing or exporting designed files to other platforms. QCAD Here is other professional grade 2D CAD software that woodworkers can take advantage of due to its specialized features and documentation tools to create complex furniture designs. QCAD provides you with 40 design tools and 20 modification tools to work with. Other features of this free software include: An extensive library of parts with more than 4,800 CAD parts that you can incorporate into your DesignsSupport for windows, Mac and Linux operating systems. QCAD is open source and extensible, which means you can expand your ability to meet specific design requirements. TinkerCAD Although this software is widely known as one of the first browser-based CAD software. This means that you don't have to download anything, but simply run your furniture design using your favorite browser. TinkerCAD features include: Extensive tools for 2D drawing tasks and 3D modeling. Documentation support and the ability to share designs with others. Conclusion The design of unique furniture begins with creativity and your understanding of craftsmanship, but having excellent tools also helps with the process. So, get any of these free furniture design software and start exploring today. Today.
